

Simplifying Internet Access for Hospitality Properties

THE POWER TO IMPROVE CUSTOMER SATISFACTION, INCREASE ROOM NIGHTS AND REVENUE POTENTIAL

SolutionIP™ is a network-based software product that allows properties like hotels, convention centers, universities and hospitals to offer and bill for reliable high speed Internet service, while automating provisioning and eliminating security and liability risks.

SolutionIP™ handles user registration and provides flexible pay-per-use billing options and payment methods direct or through property management systems or video on demand systems. The software offers advanced security features and unique marketing tools.

PROVEN SUCCESS IN THE HOSPITALITY INDUSTRY

SolutionInc has 10 years of experience in the hospitality and Internet industry. SolutionIP™ is installed in more than 700 hotels around the world, including 14 of the world's 20 largest hotels. SolutionInc's hotel customers include InterContinental Hotels, Mandarin Oriental, Marriott, Starwood, Hilton Hotels, Wyndham Hotel Group, Choice Hotels and Radisson Suites.

SolutionIP™ also powers 12.5 million square feet of convention center space, with customers including the Sands Expo in Las Vegas, the Metro Toronto Convention Centre and the National Trade Centre in Toronto.

SEAMLESS ACCESS

SolutionIP™ allows hotels, motels and resorts to offer reliable high speed Internet access (HSIA) to their guests in wired or Wi-Fi environments. With SolutionIP™, end users - regardless of their location - self activate their Internet connectivity.

A Web page directs end users through simple steps to register and instantly connect without reconfiguring their computer. The system provides seamless plug and play Internet access for DHCP and static IP clients, proxy configured browsers, adaptive one-to-one NAT for VPN users, and email redirection.

FLEXIBLE BILLING

With SolutionIP™, properties have a great deal of flexibility in how to authenticate and bill the end user for service. Hotels can choose to offer the service free to guest, charge for service by credit card or allow the guest to bill the service to the room. Properties can also give or sell access codes to users for specified lengths of time. Access codes help to control guest access for guest rooms, common areas and meeting rooms, allowing the property to charge for meeting room access even if guest room access is free.

BANDWIDTH CONTROL

With SolutionIP™'s standard bandwidth management capabilities, properties can control the LAN usage by offering different bandwidth speeds and pricing combinations. Guests have the option to select the "free" base speed or upgrade to higher speed levels for a small fee.

ADVANCED SECURITY

The system offers properties advanced security through unique authentication and SPAM control features. Installing SolutionIP™ prevents unauthorized Internet access. Users connecting to a SolutionIP™ network are required to authenticate before gaining Internet access.

The worldwide ranks of broadband-enabled hotels will more than triple, growing from 14,300 properties in 2004 to nearly 54,000 properties in 2009.

In-Stat report, "Battling for Broadband: Broadband in the Hospitality Industry"

Growth in the next few years will focus on two and three star properties in North America. **In previously deployed hotels, broadband will be pushed into new areas and new applications.**

Amy Cravens, In-Stat Analyst

TOTAL SOLUTIONS, VALUE ADDED PRODUCTS and SERVICES

SolutionInc is pleased to provide Internet solutions to hospitality properties. SolutionInc's software is completely customizable allowing hotels to take advantage of a feature-rich product that can be customized to suit their unique requirements.

Your High Speed Internet Solution

With SolutionInc's high speed Internet solution, you can:

- Increase guest satisfaction and repeat business by providing reliable HSIA to guests
- Easily expand coverage to convention and meeting rooms, generate net new revenue
- Increase occupancy rates
- Decrease administration and support costs, decrease demand on front desk

High Speed Internet in a Hospitality Environment

Your total Internet solution includes:

- Broadband Internet
- SolutionIP™ Hospitality Software
- Wireless network infrastructure, including but not limited to:
 - Wireless LAN solution
 - Cisco 802.11 access points
 - Switches
 - Cabling and other mounting hardware
- Guest support

About SolutionInc Limited

SolutionInc Limited (TSX-VEN: STL) is recognized as one of the leaders of Internet connectivity and hotspot management. SolutionInc's software system allows people with laptops to easily and securely connect to the Internet from a hotel room, a convention center, or any type of WiFi hotspot. The system allows the property or Internet Service Provider (e.g. telecommunications company) to register users, to bill for service and show the user targeted messages. The company provides software and services to the hospitality and telecommunications industries.

SolutionInc's flagship software product, SolutionIP™, is well known in the industry as proven and scalable.
